## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jensen (US 7,050,567) in view of Chavez (US 6,198,938).

Regarding claim 19, Jensen discloses a method of performing a predetermined action on wireless calls, comprising: determining whether the received call falls within a class of calls, the class of calls being one of location incentive offers, based games, and wireless location based advertisements (Figure 4, # 62, col. 3, lines 12-16; col. 3, lines 67-col. 4, lines 1-11. Note that Col. 4, lines 5-11 teaches differentiating between calls related to product families offers, which reads on receiving calls within class of on incentive offers or advertisements)); and performing a predetermined action on the received wireless call when the determining step determines that the received wireless call falls within the class of wireless calls (col. 4, lines 22-26, teaches delivering the call type when determining type information, which reads on executing action), but is silent on receiving a wireless call.

Chavez teaches receiving wireless communications within a wireless communication system via a wireless switching system to be terminated at a wireless terminal (col. 2, lines 56-63, col. 3, lines 18-31).

It would have been obvious to one skilled in the art at the time of the invention to modify Jensen, such that generating wireless calls in wireless connections, to provide extensive capability to the system functionality.

Regarding claim 20, the combination of Jensen and Chavez discloses establishing the class of wireless calls (Jensen, col. 1, lines 66-67-col. 2, lines 1-5, teaches having a number of different call types, which correspond to the establishment of type of calls).

Regarding claim 21, the combination of Jensen and Chavez discloses the predetermined action is screening the received wireless call (Jensen, col. 2, lines 16-23, col. 4, lines 22-25, teaches determining the type of calls).

### ***Response to Arguments***

3. Applicant's arguments with respect to claims 19-21 have been considered but are moot in view of the new ground(s) of rejection.
